

Auto-ID solutions. Standards driven, Custom Built.

RFID E-CONVEYOR TUNNEL

HIGH-SPEED READER SYSTEM

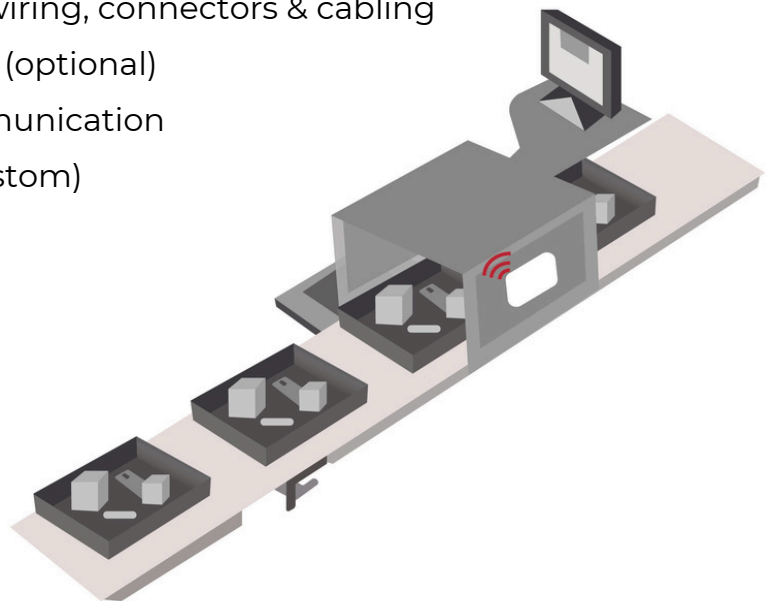

RFID tunnel system is ideal for high-speed reading of item or case level data on conveyor lines for industrial applications. Customized tunnels are designed to integrate with conveyor systems or be added to your pre-existing systems for high-speed & bulk capture and verification of item or logistics units.

Features & Benefits :

- Modular design (dimensions)
- Belt conveyor with variable speed (integrated)
- RF shielding materials on the tunnel (targeted read range)
- Capable of reading multiple tagged products (high speed)
- Powered with high-performance UHF readers & antennas (adjustable)
- Integrated electronics module for wiring, connectors & cabling
- Light stack, Alarm, buzzer & display (optional)
- Power over Ethernet or Wi-Fi communication
- RFID middleware & application (custom)
- Power supply (standard)

Idea For:

- WIP Traceability
- Warehouse automation
